I have to tell you about how MY Beau helped Cassie, my 10 year old Blue Heeler Cross...

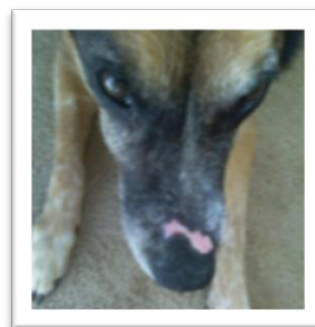

About a year ago, she was diagnosed with stage three melanoma cancer on the top of her nose. The growth was removed and we proceeded with chemotherapy. As the process progressed, she was starting to look very old. The chemo appeared to be helping, but she was very tired and lying in bed all day. We tried a couple of different vitamins to boost her immune system, but I felt as though I was spending money and not seeing any results. I stopped the vitamins we had her on, and observed no change.

About the time we had to freeze off a second growth, I found **MyBeau Exceed** and started her on it immediately. Within a week, I saw a transformation! She started getting out of bed and greeting me at the door again. She started to come out at night to sit and cuddle with me while watching television -- something she had loved to do before her illness. She even started playing fetch with my other dog again and actually started demanding that she have her own ball to be thrown for her.

When I took her to the vet for her next check up, she commented on how great Cassie's coat looked and the higher level of energy. Cassie was doing remarkably well, however, the vet warned that the bright pink scarring on her nose may remain there permanently.

As you can see in the later photo, her nose has improved, regaining its black color and even some of the hair. Cassie is healthy again and I plan on having her around for many years to come. I can't tell you how pleased I am with Cassie's change in demeanor and return to health, thanks to My Beau supplements!
