

Study One (Jan 2004): The addition of MyBeau[®] to a commercially available “Complete and Balanced” dry dog food.

Digestibility:

	Dry Matter	Crude Protein	Energy
Control (dry dog food)	78.9% ^a	81.5%	85.2% ^a
Test (dry dog food + MyBeau [®])	81.6% ^b	81.3%	86.8% ^b

Faecal Output

	Faecal Output (g faeces/kg diet)
Control (dry dog food)	598 ^a
Test (dry dog food + MyBeau [®])	561 ^b

Study Two (Dec 2005): The addition of Exceed[®] to a commercially available AAFCO formulated dry dog food.

Digestibility:

	Dry Matter	Crude Protein	Energy
Control (dry dog food)	75.2% ^a	76.9%	82.4% ^a
Test (dry dog food + Exceed [®])	79.3% ^b	78.6%	85.8% ^b

Faecal Output

	Faecal Output (g faeces/kg diet)
Control (dry dog food)	637 ^a
Test (dry dog food + Exceed [®])	545 ^b

In Conclusion:

Both trials show significantly higher dry matter and energy digestibility when MyBeau or Exceed is added to the diet. In addition, a significantly lower amount of faeces is produced when MyBeau or Exceed is added to the diet.
